

# The Warning Signs of Primary Immune Deficiency<sup>®</sup>

If you or someone you know are affected by two or more of the following warning signs, speak to a physician about the possible presence of an underlying primary immune deficiency.

- 1** Eight or more new ear infections within 1 year.
- 2** Two or more serious sinus infections within 1 year.
- 3** Two or more months on antibiotics with little effect.
- 4** Two or more pneumonias within 1 year.
- 5** Failure of an infant to gain weight or grow normally.
- 6** Recurrent, deep skin or organ abscesses.
- 7** Persistent thrush in mouth or elsewhere on skin, after age 1.
- 8** Need for intravenous antibiotics to clear infections.
- 9** Two or more deep-seated infections.
- 10** A family history of primary immune deficiency.
